

## Antioquia Gold Reports Additional Positive Drilling Results at Cisneros, including 31.2 g/t Au over 1.3 metres and 16.0 g/t Au over 3.3 metres

September 11, 2012, Calgary, Alberta: Antioquia Gold Inc. ("Antioquia Gold") (TSX-V: AGD; OTCQX: AGDXF) has received the assays of the last 4 of 13 completed holes from the 5,069 metres of Phase 1 drilling with positive results that continue to reinforce the previously reported significant dimensional increase of the Guayabito deposit to depth and along strike. Gold values from one hole graded **16.0 g/t Au over 3.3 metres**, including **53.1 g/t Au over 1.0 metre** and **84.0 g/t Au over 0.5 metres**; another hole graded **31.2 g/t Au over 1.3 metres** including **129.8 g/t Au over 0.3 metres**. Highlights of the results for these holes are shown in Table 1 below.

Phase 1 commenced on April 26, 2012 and focused exclusively on the Guayabito deposit and is part of a planned 3-phase 20,000 meter diamond drilling program at its flagship Cisneros Project in Colombia. As reported in the press release of August 8, 2012, the program has resulted in expanding the length of known mineralized structures along strike to approximately 300 metres and has confirmed continuity to a depth of almost 500 metres with all structures remaining open along strike and depth. Also, several new mineralized structures were encountered with encouraging potential gold values. Plan and section views of the previous structures and the 2012 extension are illustrated in Figures 1 and 2 (and also found on the website [www.antioquiagoldinc.com](http://www.antioquiagoldinc.com)).

**Table 1 - Highlights Final 4 Holes of Phase 1 Drilling at Guayabito Deposit**

<u>Drill Hole</u>	<u>From</u>	<u>To</u>	<u>Length (m)*</u>	<u>Au (g/t)</u>
GYB12-081	106.00	107.50	1.50	4.51
GYB12-082	366.70	368.80	2.10	2.32
GYB12-082	375.20	378.20	3.10	1.68
including	375.20	376.70	1.60	3.15
GYB12-082	395.40	409.10	13.70	3.28
including	398.50	401.70	3.20	5.37
including	405.00	409.10	4.10	4.70
GYB12-082	420.40	421.70	1.30	31.24
including	420.40	420.70	0.30	129.80**
GYB12-083	261.00	264.25	3.25	15.99
including	263.30	264.25	0.95	53.14
including	263.30	263.80	0.50	84.00**
GYB12-84	313.15	314.45	1.30	3.22
including	313.65	313.95	0.30	13.94

Notes: \* Intervals reported are drilled thickness and may not represent true width.  
\*\* These samples verified using Gravimetric finish.

We refer the reader to the March 21, 2012 and August 8, 2012 News Releases for further background information.

Phase 2, consisting of approximately 5,000 metres of drilling divided equally between the Guaico and Papi/Ivana targets continues at Guaico and has been completed at Papi/Ivana. Laboratory results are pending and the resultant review and interpretation by the geology team will follow.

The regional exploration program continues on the other 90% of the Cisneros property with several of the regional targets identified under exploration. Field work is comprised of geological mapping, prospecting and soil geochemical profiles. The Cisneros property regional exploration program is an integral part of Antioquia Gold's future as it is designed to confirm the potential and the existence of multiple gold deposits on the Cisneros property.

***About Antioquia Gold Inc.***

*Antioquia Gold has been exploring for precious metals in Colombia since 2007 and has accumulated a land package of close to 40,000 hectares located throughout Colombia. Antioquia Gold's principal asset, which is being actively explored, is its 5,630 hectare Cisneros Project, located 55 kilometres northeast of Medellin in the Department of Antioquia, Colombia. At the Cisneros Project the Company has conducted extensive geochemical and geophysical programs over the entire property and has identified to date 11 exploration zones. On the original discovery zone it has drilled over 40,000 metres and is well versed in the understanding of the deposit type and the project's path to resource definition and production.*

*To ensure reliable sample results Antioquia has a rigorous QA/QC program in place that monitors the chain of custody of the samples and includes the insertion of blanks, preparation duplicates, field duplicates, and certified reference standards in each batch of samples. Core is photographed and sawed in half with one half retained in a secured facility for future reference if needed. Sample preparation (crushing and pulverizing) is performed at ACME laboratories in Medellin, Colombia.*

*Samples prepared by ACME (Medellin) are direct shipped to ACME Laboratories in Vancouver Canada, an ISO certified laboratory for analysis. Assay for gold (36 elements) is performed initially by 1Dx30g Agua Regia Digestion. Au values > 100,000 ppb are automatically checked by Gravimetric finish and AGD further checks all assay values  $\geq$  10,000 ppb by Metallic Assay. Furthermore, as part of the QA/QC program AGD has sent to SGS laboratory in Medellin Colombia batches of pulp samples for check Fire Assay's.*

***Forward-Looking Statements:***

*This news release may contain certain forward-looking information. All statements included herein, other than statements of historical fact, including, but not limited to, statements about the seven additional regional exploration zones adding significant exploration potential to the overall property, the Company's plans for exploration in 2012, including the plans for 20,000m of drilling, are forward-looking statements. Forward-looking statements are based on management's assumptions and are subject to risks and uncertainties. There can be no assurance that any forward-looking statement will prove to be accurate, and actual results and future events could differ materially from those anticipated in such information due to a number of factors beyond the Company's control. These assumptions, risks and uncertainties include, among other things, management's assumptions about government permitting, equipment procurement and the availability of the necessary consultants and capital, as well as the risks of delay in any of these activities and the risks inherent in Antioquia Gold's operations, including the risks that the Company may not find any minerals in commercially feasible quantity or raise enough money to fund its exploration plans. These and other risks are described in the Company's Annual Information Form and other public disclosure documents filed on the SEDAR website maintained by the Canadian Securities Administrators. The Company does not undertake to update any forward-looking information except as may be required by applicable securities laws.*
